PR USD ACC: IE00B7MKN521

High Yield | Factsheet as of 31 May 2026

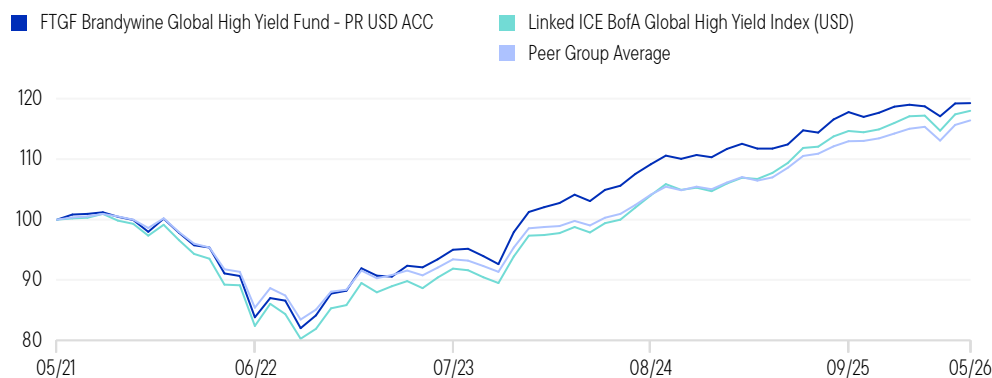

This is a marketing communication. Please refer to the prospectus of the UCITS and to the KID before making any final investment decisions.

## Investment Overview

To seek to generate high levels of income and, as a secondary objective, capital growth. The Fund mainly invests, directly or indirectly through derivatives, in below investment grade (high yield) corporate bonds. They may also invest in government bonds and in debt securities rated as low as C by Moody's or D by S&P. These investments may be from anywhere in the world, including emerging markets.

Past performance does not predict future returns.

**What are the Risks?**

The Fund does not offer any capital guarantee or protection and you may not get back the amount invested. The Fund is subject to the following risks which are materially relevant: **Asset-backed securities:** The timing and size of the cash-flow from asset-backed securities is not fully assured and could result in loss for the fund. These types of investments may also be difficult for the fund to sell quickly.

**Bonds:** There is a risk that issuers of bonds held by the fund may not be able to repay the investment or pay the interest due on it, leading to losses for the fund. Bond values are affected by the market's view of the above risk, and by changes in interest rates and inflation.

**Derivatives:** The use of derivatives can result in greater fluctuations of the fund's value and may cause the fund to lose as much as or more than the amount invested. **Emerging markets investment:** The fund may invest in the markets of countries which are smaller, less developed and regulated, and more volatile than the markets of more developed countries. **Fund counterparties:** The fund may suffer losses if the parties that it trades with cannot meet their financial obligations. **Fund currency:** Changes in exchange rates between the currencies of investments held by the fund and the fund's base currency may negatively affect the value of an investment and any income received from it. **Fund operations:** The fund is subject to the risk of loss resulting from inadequate or failed internal processes, people or systems or those of third parties such as those responsible for the custody of its assets, especially to the extent that it invests in developing countries. **Interest rates:** Changes in interest rates may negatively affect the value of the fund. Typically as interest rates rise, bond values fall. **Liquidity:** In certain circumstances it may be difficult to sell the fund's investments because there may not be enough demand for them in the markets, in which case the fund may not be able to minimise a loss on such investments. **Low rated bonds:** The fund may invest in lower rated or unrated bonds of similar quality, which carry a higher degree of risk than higher rated bonds. Complete information on the risks of investing in the Fund are set out in the Fund's prospectus.

**Glossary**

**Ongoing Charges Figure (OCF):** The Ongoing Charges Figure (OCF) includes the fees paid to the management company, the investment manager and the depository, as well as certain other expenses. The OCF is calculated by taking the relevant main material costs paid out over the 12-month period indicated and dividing them by the average net assets over the same period. The OCF does not include all expenses paid by the fund (for example, it does not include what the fund pays for buying and selling securities). For a comprehensive list of the types of costs deducted from fund assets, see the prospectus. **Comparator:** Benchmark is used for comparing Fund performance, but is not a constraint to Fund Investment. **Average Credit Quality:** The average credit quality reflects the holdings of the underlying issues, based on the size of each holding and ratings assigned to each based on rating agency assessments of its creditworthiness. **Average Life:** An estimate of the number of years to maturity, taking the possibility of early payments into account, for the underlying holdings. **Effective Duration** is a duration calculation for bonds with embedded options. Effective duration takes into account that expected cash flows will fluctuate as interest rates change. Duration measures the sensitivity of price (the value of principal) of a fixed-income investment to a change in interest rates. The higher the duration number, the more sensitive a fixed-income investment will be to interest rate changes. **Standard Deviation:** Measure of the degree to which a fund's return varies from the average of its previous returns. The larger the standard deviation, the greater the likelihood (and risk) that a fund's performance will fluctuate from the average return.

**Portfolio Data Information**

**Exposure:** Notional exposure figures are estimated and are intended to show the portfolio's direct exposure to securities and indirect exposure, through derivatives. Direct and indirect exposures are subject to change over time and methodologies for calculating indirect exposures vary by derivative type. Portfolio breakdown percentages may not total 100% and may be negative due to rounding, use of derivatives, unsettled trades or other factors.

**Credit Quality** is a measure of a bond issuer's ability to repay interest and principal in a timely manner. The credit ratings shown are based on each portfolio security's rating as provided by S&P Global Ratings, Moody's Investors Service and/or Fitch Ratings, Inc. and typically range from AAA (highest) to D (lowest), or an equivalent and/or similar rating. For this purpose, the manager assigns each security the middle rating from these three agencies. When only two agencies provide ratings, the lower of the two ratings will be assigned. When only one agency assigns a rating, that rating will be used. Foreign government bonds without a specific rating are assigned a country rating, if available. Securities that are unrated by all three agencies are reflected as such. The credit quality of the investments in the portfolio does not apply to the stability or safety of the portfolio. The methodology used for the calculation of credit quality ratings displayed may differ from the methodology for monitoring investment limits, if applicable. **Please note, the portfolio itself has not been rated by an independent rating agency.**

**Important Information**
